

Flat shims

From 1 to 6 mm, the flat shims help water run off under the deck joists and level the deck by correcting low heights.

Application & use

Flat shims allow water to run off under the deck joists, and level the deck by correcting slight heights from 1 to 6 mm.

A deck requires precise details, such as the use of flat shims

They are used for all types of shimming on wooden floors, as well as for all interior and exterior joinery work.

Technical characteristics

Composition: polypropylene

Color: grey (1mm) / blue (2 mm) / red (3 mm) / yellow (4 mm) / vert (5 mm) / noir (6 mm)

Dimensions : 100 mm length

Thickness: from 1 mm to 6 mm

Resistance to high temperatures : 90 à 155°C

Resistance to atmospheric agents: UV and frost

Product benefits

- + Allows water to run off under the deck joists
- + Correct low thickness from 1 to 6 mm
- + Rot-proof, durable
- + Weather and UV Resistant
- + **Compatible with wooden, composite and aluminium joists**
